

Short Description

Spot, share and ask questions on interesting things you find around the You without revealing your real identity.

Long Description

Spottd is an android app to share interesting things you find around you in a whole new way. Our users are called Spotters and everyone has a unique username or as we call it, "Spottername". This enables our Spotters to share photos without revealing their real identity. With a considerable number of users, we expect Spottd to have photos on any topic in the world as it's easier to share and group posts since all posts on Spottd are connected to a single #tag unlike multiple #tags on other social media platforms.

Key Features

1. Share photos of any resolution or aspect ratio without revealing your real identity
2. Group posts by #tags (single #tag is tagged to every post on Spottd)
3. Personalised feed based on interested #tags
4. Unique User Interface that focuses on your interests.
5. Create and manage a Spottername and profile
6. Follow other Spotters around the planet
7. Reply to posts created by other Spotters and engage in interesting conversations

What's Different

1. Spottername is your secret identity on Spottd
2. No notifications which means a user is not distracted by the app
3. Only Email id is required to create an account and post on Spottd
4. Location, gender and Date of births are not collected from any user.
5. No Filters, effects or Cropping out of any image to protect the originality of the picture
6. Instant removal of inappropriate content

History

Spottd was created by Suyog Eleyadath and Santhosh Kumar as an app to share interesting content without revealing your real identity which later pivoted to a Question and Answer based platform as they believe that it would encourage more people to ask questions on strange things they find around them. Spottd is built considering every negative impacts of other Social media platforms thereby creating an improved way to share photos online. Spottd was launched on July 28th of 2020 as an open Beta version and is open to any user willing to test and give feedbacks on the product. This model of launch helps any user to work with the company, improve existing features and request new features thus creating an app that a user really needs. We expect to keep the product in an open beta state until we are sure that it is a product that is a necessary element rather than an app for passing time.

Future

People post photos of random things from around the planet attached to a single #tag. This helps us to group photos into their respective category unlike other platforms which have photos attached to multiple tags. We believe that the single #tag system is the most efficient way to do this and expect to have photos of any object/place or living things on the platform in 5 years. We expect people to find answers and photos on any interesting thing people spot around them.
